Frequently Asked Questions - Sealcoating

Q: *Why should I sealcoat my driveway or parking lot?*

A: To protect your asphalt surface against the elements (sun, rain, snow, salt, gas, oil etc). We want to help you protect and ensure the longevity of your investment.

Q: *Why choose Constantine Sealing Service?*

A: Our customer service and our experience in the industry. Our family business means there is integrity behind the name. We will go above and beyond to ensure your experience with Constantine Sealing is everything you had hoped for and more. The attention to detail cannot be duplicated anywhere else. The quality of our work product depends on our future. With that in mind, every customer is treated like family.

Q: *What additives are in Constantine's Sealer?*

A: We use a commercial grade asphalt sealer on every job. Our sealer is a petroleum resin based product mixed with sand, clay, asphalt polymers, finely milled black iron aggregate and water. Petroleum Resin is a newer sealer still offering the same benefits as a coal-tar sealer without the toxicity level. Meaning it is better for you, your pets, and the environment.

Q: *How long should I stay off the pavement after sealer is applied?*

A: Driveways we recommend 2 days, parking lots and high traffic areas you can get away with 24 hours. Obviously the long the better, but after 24-48 hours the sealer has had proper time to cure.

Q: *How is the sealer applied?*

A: **Residential** we apply 1 coat very neatly with a squeegee

Commercial we use a spray application usually 2 coats or otherwise specified by customer

Q: *Will the weather affect my job?*

A: We cannot seal if the surface is wet or if there is rain in the forecast. Unfortunately we cannot control the weather. Please work with us as we try to get your driveway or parking lot done as quickly as possible. Weather permitting.

Q: *How often should I seal my pavement?*

A: We recommend every 2-4 years depending on how many times you have sealed your driveway. The more frequently it is sealed the longer the product last.
